RIM Valley Panel

Description

The patented RIM Valley panel is designed to mount in the roof valleys and minimize the formation of ice dams that would create water ponding behind the ice dams. First developed in 1994, RIM Valley panels have successfully eliminated water ponding behind ice dams on hundreds of commercial and residential applications.

Specifications

Material Selection:	Copper or Kynar painted aluminum
Color Selection (Alum.):	Over 30 colors
Heating Cable Supplied:	2 runs per foot of panel Model SRH-1 for 120V operation Model SRH-2 for 208 to 277V operation
Panel Lengths:	Up to 10 feet per panel
Components Supplied:	Power connection kit(s), panel splice covers, panel end caps
